## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 2 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Examiner is unclear what applicant means by herringbone arrangement.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

In light of the 35 USC 112 rejection, claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Kich et al US Patent 6,201,949 (of record)

Kich et al disclose a multiplexer comprising a manifold (66 which examiner considers to be the busbar for distributing signal portions 90,92), shorted circuited tees (64A-64C having short circuited end 82), apertures (83A 83B) for passing a signal between the tees and channel (waveguide) filters (62A 62B). The channel filters (62A and 62B) are placed in an upright position over the apertures (83A 83B) which are disposed in the sidewalls of the shorted circuit tee (64A).

### ***Allowable Subject Matter***

Claim 4 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Thomson et al US Patent 6,897,746 discloses a waveguide composed of material having low coefficient of thermal expansion, which compensates for temperature changes.
